Description of the study		Reference
1. Study design	Randomized controlled trial	1
2. Study population	Adults with type 2 diabetes	2
3. Interventions	Insulin therapy vs. oral hypoglycemic agents	3
4. Outcomes	HbA1c, weight, quality of life	4
5. Results	Insulin therapy resulted in lower HbA1c levels compared to oral hypoglycemic agents.	5
6. Conclusion	Insulin therapy is more effective than oral hypoglycemic agents in controlling blood glucose levels in adults with type 2 diabetes.	6
7. Limitations	Short duration of follow-up, potential bias in outcome measurement.	7
8. Strengths	Large sample size, well-defined inclusion and exclusion criteria.	8
9. Funding	Not specified	9
10. Ethics approval	Approved by the local ethics committee	10
11. Registration	Registered in the Clinical Trials Registry	11
12. Publication status	Published in a peer-reviewed journal	12
13. Date of publication	2010	13
14. Author information	Dr. John Doe, MD, PhD, Department of Medicine, University of California, San Francisco, CA, USA	14
15. Correspondence	Dr. John Doe, MD, PhD, Department of Medicine, University of California, San Francisco, CA, USA	15
16. Conflict of interest	None declared	16
17. Acknowledgments	None declared	17
